Sequence 17, Application US/09623551

Sequence 17, Application US/09623551

Patent No. 6774281

GENERAL INFORMATION:

APPLICANT: Stuiver, Maarten

APPLICANT: Stuiver, Jerome

APPLICANT: Stuiver, Jerome

TITLE OF INVENTION: Method For The Induction Of Pathogen Resistance In

TITLE OF INVENTION: Plants

TITLE OF INVENTION: Plants

TITLE OF INVENTION: Plants

FILE REFERENCE: MOG57706/UST

CURRENT APPLICATION NUMBER: US/09/623,551

CURRENT PILING DATE: 1998-03-06

PRIOR FILING DATE: 1999-03-08

PRIOR FILING DATE: 1999-03-08

NUMBER OF SEQ ID NOS: 29

SEQ ID NO 17

FERMINE PATENTION NOWER: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5310 TAGCCTTTCCTTTATCGCAATGATGGCATTTGTAGAAGCCATCTTCCTTTTCTACTGTCC 6369

US-09-810-861B-4/C

US-09-810-861B-4/C

Sequence 4, Application US/09810861B

Patent No. 6770799

GENERAL INFORMATION:

APPLICANT: Mory Tasfrir S.

APPLICANT: Mory Hermona

APPLICANT: Arntzen, Charles J.

APPLICANT: Macon, Hugh S.

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: EXPRESSION OF RECOMBINANT HUMAN ACETYLCHOLINESTERASE IN

TITLE OF INVENTION: DATE: 2001-03-16

PRIOR PRICATION NUMBER: 60/190,440

PRIOR APPLICATION NUMBER: 60/190,440

PRIOR APPLICATION NUMBER: 60/190,440

PRIOR APPLICATION OF SEQ ID NOS: 5

SOFTWARE: PATENTION OF SEQ ID NOS: 5 PEATURE:
NAME/KRY: misc feature
LOCATION: (11862)..(12157)
OTHER INFORMATION: Description of Artificial Sequence: plasmid vector
OTHER INFORMATION: pTM036. Identity of sequence residues 11862-12157 unknown. 6249 6308 33 92 AGCCCTCTGGTCTTCTGAGACTGTATCTTTGATATTCTTGGAGTAGACGAGAGTGTCGTG CCATCTTTGGGACCACTGTCGGTAGAGGCATTCTTGAACGATAGCTTTCCTTTATCGCA 6668 ATGATGGCATTTGTAGAAGCCATCTTCCTTTTCTACTGTCCTTTTCGATGAAGTGACAGAT 212 ATGATGGCATTTGTAGAAGCCATCTTCCTTTCTACTGTCCTTTCGATGAAGTGACAGAT 152 AGCTGGGCAATGGAATCCGAGGAGGTTTCCCGATATTACCCTTTGTTGAAAAGTCTCAAT 6190 AGAIATCACATCAATCCACTTGCTTTGAAGACGTGGTTGGAACGTCTTCTTTTTCCACGA TGTTCCTCGTGGGGGGGGTCCATCTTTGGGACCACTGTCGGTAGAGGCA-TCTTGAACG Gaps

Direct Submission

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage:
BP 191 91006 EWRY cedex - FRANCE (B-mail: seqref@genoscope.cns.fr
- Web: www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G.
Genoscope members carried out sequencing and annotation: Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGV INRA: Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). Sprime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Castelli, V., Aury, J.M., Jaillon, O., Wincker, P., Clepet, C., Menard, M., Cruaud, C., Quetter, F., Scarpelli, C., Schachter, V., Temple, G., Caboche, M., Weissenbach, J. and Salanoubat, M. Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences: A Combined Approach to Evaluate and Improve Arabidopsis Genome
                                                                                                                                                                                                                                                                                                                                         Arabidopsis thaliana Full-length cDNA Complete sequence from clone GSLTFEB522B04 of Flowers and buds of strain col-0 of Arabidopsis thaliana (thale cress).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           attp://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full

Direct Submission

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 BVRX cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.

URGY INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences) : 5 prime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full_length

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage:
BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation: Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

/note="Vector: pDS-Lox; Sequence generated in the course of an Arabidopsis T-DNA tagging program. TAIL-PCR was used to generate sequencing templates that represent A.t. genomic DNA flanking the left border of the pDs-Lox T-DNA insert. PCR products were sequenced directly by using the p745 primer 5' AACGTCCGCAATGTGTTATTAAGTTGTC 3'"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5216 CAGCTATATCCAAAGGCTAATTTTGAGGCTCAAAGGAAAGGTATGGTTATAAAACTATCT 5275

Data analysis performed in the frame of REGULATORS (Exploiting inter-species conservation in promoter sequences to identify regulators of reproductive development and physiological performance), a Trilateral Co-Operation in Plant Genomics between Spain (MCY). France (GENOPLANTE) and Germany (GABI) coordinated by G. Coupland (coupland-ad-mpiz-koeln.mpg.de). Authors: Vincent Thareau (IBP-Orsay UMR8618 CNRS-UPS, thareau-ad-ibp.u-psud.fr) and Alain Lecharny (MCKV-Erry UMR INRA-CNRS-UBVE,

Definition of the terms used to describe the quality of the clone: The about 2550 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contiggs and singletons were blasted against CDS plus pseudogenes from the remaining terms for Sequences from the resulting AGI code is presented if more than 90 percent identity was found. The sequences or contigs for which against all TiGRV5 introns, and matches longer than 50 percent identity are reported as 'intron found'. The remaining terms for Sequences, and matches longer than 50 percent identity are reported as 'intron found' all perfect after pairwise allymment with CDS plus pseudogenes from the TiGRV5 annotation file. The sequences or contigs for which against all TiGRV5 protein sequences was perfected. Parter than 95 percent identity; full good: better than 95 percent

//note="Vector: pDONR201; In the context of the EU-funded project REGIA (CDG-CT11999-00876, coordinator Javier Paz-Ares), a set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using cDNA from various A. thaliana tissues as a template. Initially, it was planned to use year recombination to move the ORFs from the cloning vectors into target constructs. For this reason, a number of the clones contain 'REGIA tags' (RG_tag1: 5pr-AATTCCCGGGAATC-3pr; RG tag2: 5pr-CATGGCAATTCCCGGGAATC-3pr; During the lifetime of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4472
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the MPI of Plant Breeding Research (ADIS; head: Bernd
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TGCCTCCTCCAAAGCCTTGGAGATTACAATTCAAGCAACACTGGATTAGATTTTGGTG 4652
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Weisshaar), the plasmids were re-transformed into DHSalpha, arrayed into 96-well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult because a number of clones displayed poor growth. Data submission has been handled by GabiPD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    709
percent of the sequence; no similarity: no hit from BLASTp. Note that the collection contains a few clones for which sequencing was not successful, which could have simple technical reasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TGGTGGAACGTGCTCGGAAAGTCCCATTGCCTGAAGCAGCTCTAAATTGCCTA

lecharny-adibb. Unsurenty our inserting deality of the clone:
Definition of the terms used to describe the quality of the clone:
The about 220 sequences from the clone collection were sorted
according to clones and clustered. If more than one contig was
singletons were blasted against COS plus pseudogenes from the
TIGRYS annotation, and matches longer than 50 bp with 95
percent identity was found. The sequences were also blasted
against all TIGRYS introns, and matches longer than 50 bp with 95
percent identity are reported as 'intron found'. The remaining
terms for SeqAnalysis describe the outcome of the evaluation of the
CDS detected after pairwise alignment with CDS plus pseudogenes
from the TIGRYS introle as 'intron found'. The remaining
a full CDS with or without STOP codon was detected, a BLASTp
against all TIGRYS protein sequences was performed. Full perfect:
100 percent identity, full good: better than 95 percent identity
over more than 95 percent of the sequence; partial good: better
than 95 percent identity over less than 95 percent identity
weak similarity: less than 95 percent identity
weak similarity: less than 95 percent identity
weak similarity: less than 95 percent identity
obercent of the sequence; no similarity: no hit from BLASTP.
Note
that the collection contains a few clones for which sequencing was
not successful, which could have simple technical reasons.
Obviously, information about these clones is missing in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /clone=1006-G10"
//lab host==80.coli DH5alpha"

/clone=11b="WPIZ-ADIS-065d"
//note=="Vector: pDONR201; In the context of the EU-funded
project REGIA (QLG-T11999-00076, coordinator Javier
Paz-Ares), a set of transcription factor ORFs was
generated. The ORFs were produced in a decentralized way
in the labs of the participants. Most of the ORFs were
generated by RT-PCR using cDNA from various A. thaliana
tissues as a template. Initially, it was planned to use
yeast recombination to move the ORFs from the cloning
vectors into target constructs. For this reason, a number
of the clones contain 'REGIA tags' (RG tag1:
5pr-AATTCCAGCTCACCAC-3pr; RG tag2:
5pr-AATTCCAGCTCACC-3pr; RG tag2:
5pr-CATGGCATTCCCGGGCATC-3pr). During the lifetime of the
project, the GATEWAY system became available and finally
all ORFs were transferred into GATEWAY vectors. At the end
of the REGIA project, the clones were collected as plasmid
of the Reding Research (ADIS; head: Bernd
Weisshaar), the plasmids were re-transformed into
DH5alpha, arrayed into 96-well plates and new plasmid bNA
was prepared. Re-transformation proved to be difficult
because a number of clones displayed poor growth. Data

Atlain Lecharity University our invarious of the quality of the clone: The about 220 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was formed, the clone was designated 'Contamination'. The contigs and singletons were blasted against COB plus pseudogenes from the TIGRYS annotation, and the resulting AGI code is presented if more than 90 percent identity was found. The sequences were also blasted against all TIGRYS introns, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for Sequences out come of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRYS annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRYS protein sequences was performed. Full perfect: 100 percent identity, full good: better than 95 percent identity, over less than 95 percent of the sequence; partial good: better than 95 percent identity over less than 95 percent of the sequence; partial good: better than 95 percent identity over less than 95 percent of the sequence; partial good: better than 195 percent of the sequence; partial good better that the collection contains a few clones for which sequencing was not smallarity: no hit from BLASTP. Note that the collection contains a few clones for which sequencing which could have simple technical reasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                where the contraction of con

/note="Westor: pDONRS-01; In the context of the EU-funded project REGIA (GLG-CT11999-00876, coordinator Javier Paz-Ares), a set of transcription factor ORFs was generated. The ORFs were produced in a decentralized way in the labs of the participants. Most of the ORFs were generated by RT-PCR using cDNA from various A. thaliana tissues as a template. Initially, it was planned to use yeast recombination to move the ORFs from the cloning vectors into target constructs. For this reason, a number of the clones contein 'REGIA tags' (RG_tag1:
5pr-AATTCCAGCCACC-3pr; RG tag2:
5pr-CATGGCAATTCCCGGGGATC-3pr). During the lifetime of the

project, the GATEWAY system became available and finally all ORFs were transferred into GATEWAY vectors. At the end of the REGIA project, the clones were collected as plasmid DNA. For end-sequencing at the DNA core facility of the MPI of Plant Breeding Research (ADIS, head: Bernd Weisshaar), the plasmids were re-transformed into MPISapha, arrayed into 96-well plates and new plasmid DNA was prepared. Re-transformation proved to be difficult bubmission has been handled by GabipD (http://gabi.rzpd.de)."

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHi, Site 2: BglII;
RescueMu is a 4.9 kb, modified maize Mu transposon
designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription
units. For more information on RescueMu, go to the web
site 'www.zmdb.iastate.edu' and follow the links for
'RescueMu.' Grid AA was grown at UC San Diego in 2002. DNA
was extracted from leaf strips, double digested using
BamHI and BglII, and ligated to form circular plasmids.
DHIOB calls were transformed and then screened on LB

The DNA fragment(s) resulting of PCR were directly sequenced from the left border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display is available from june 2004 at http://genoplante-info.infobiogen.fr/oryzatagline/. This sequence has been generated in the framework of the prench plant genomics program Genoplante
